

The diagram illustrates a plasma jet configuration. The top section shows a horizontal jet represented by a cyan band. Within this band, a magenta line with a left-pointing arrow and a blue line with a right-pointing arrow indicate opposing flow directions. Below the jet, a black line profile shows a sharp initial drop followed by a gradual rise. A thin black line at the bottom left corner represents a boundary or electrode structure.

The graph illustrates the demographic trend of fertility in France over a 50-year period. The vertical axis (Y-axis) measures the average number of children per woman, with major grid lines at 0, 0.5, 1.0, 1.5, 2.0, and 2.5. The horizontal axis (X-axis) marks the years from 1960 to 2010 in 10-year increments. The data line starts at approximately 2.4 in 1960, drops sharply to about 1.7 by 1970, and then fluctuates slightly, peaking around 1.9 in the late 1980s before settling around 1.7 by 2010.

Year	Average number of children per woman
1960	2.4
1970	1.7
1980	1.8
1990	1.9
2000	1.8
2010	1.7
